Medico-Legal Experience

I have undertaken medicolegal work in relation to clinical negligence claims relating to breast, gynaecology and neuro-oncological cancers for over 10 years. I can opine on chemotherapy and radiotherapy treatments for relevant cancers and including metastatic and palliative disease. I accept reports dealing with Standard of Care, Delay in Diagnosis, Causation, Condition and Prognosis. I accept reports for claimant and defence, with a ratio of approximately 50:50.

Research and Audit

I have widespread experience of participation in clinical trials and publications. I was Audit Convener for Directorate for 5 years, supporting the Hospital Clinical Audit and Effectiveness agenda.

I produced and presented regular audits including best practice audits on endometrial cancers, ovarian cancers and cervical cancers (adherence and compliance with NICE Guidance). I also participated in National audits on treatment and management of cervical and ovarian cancers. I have presented my work within the Hospital and at local, regional and national conferences.

I have been involved with numerous trials, as a recruiter and lead investigator. Primarily in ovarian, endometrial, cervical and breast cancers. I produced high quality publications on a range of topics including treatment and outcomes with chemotherapy and radiotherapy for ovarian, uterine and breast cancer.
